Heavy duty latching pin

Patented technology

NEW locking mechanism

## Introducing the new **Ultra-Lock.** Integrated. Intuitive. **Invisible.**

Designed exclusively for Zipscreen, our latest locking mechanism utilises a heavy-duty latching pin, and hidden integration to secure and tension your shade, ensuring an ultra-smooth fabric finish.

Boasting self-correcting technology, the new Ultra-Lock protects your Zipscreen from unexpected obstacles and amends the position of the hem bar if the shade is disturbed, or unable to achieve a simultaneous lock.

Ultra-Lock offers supreme functionality thanks to an increased latch area and minimised movement. The new unobtrusive design is durable, reliable and can be assembled off-site, to ensure installation is easier than ever.

For the ultimate experience, pair the new Ultra-Lock with an ARC™ activated, Automate™ FT motor. Ultra-Lock works with the intuitive motor to automatically secure and tension your Zipscreen, in one effortless action.
